

- See code in github (S+F) DP.

Template Design Pattern : It is a Behavioural Design Pattern.

that defines the skeleton of an algorithm in a base (abstract) class and let's it subclass override specific steps of algorithm without changing its overall structure.

Key Idea : ① Overall workflow is fixed.

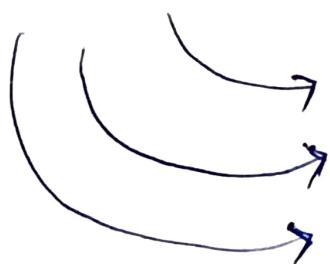

- ② Certain steps are customizable by subclasses.
- ③ Promotes code reusability & consistency.

Amazon

- * Local delivery system *
- verify order
- assign delivery partner
- track delivery

Initially they have local, wanted to have International.

- * International delivery system *

Behaviour.
